

Pushpendra Singh

React Native Engineer — Real-Time & Bilingual Mobile Products

Indore, India (Remote/WFH) | +91 95840 52090 | pushpendra.devera@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

React Native engineer who ships the hard parts of mobile: native voice and video calling across foreground, background and killed-app states; bilingual Arabic/English RTL interfaces; and the CI/CD and OTA pipeline that delivers them to the App Store and Google Play. Nearly five years across real estate, e-commerce, media and services, including extended work as a core contributor on Dallal, a bilingual Kuwait-market property marketplace spanning 75+ screens and 33 feature modules. Comfortable at the native bridge: CallKit, Android ConnectionService, PushKit VoIP, OCR. Also builds AI-assisted developer tooling, including a multi-provider LLM agent with local models.

Dallal Real Estate Marketplace — live on [the App Store](#) · [Google Play](#)

TECHNICAL SKILLS

Native & Real-Time: iOS CallKit, Android ConnectionService, PushKit VoIP, CometChat Calls SDK, Firebase Cloud Messaging, Notifee, native module integration, OCR document parsing

Internationalization: i18next, RTL layout systems, English/Arabic bilingual delivery, locale-aware UX

Mobile: React Native, TypeScript, JavaScript ES6+, React, React Navigation, Android, iOS, Hermes, Metro, cross-platform development

State & APIs: TanStack React Query, Zustand, Context API, Redux Toolkit, Axios, REST APIs, JWT authentication, refresh-token retry, AsyncStorage, Encrypted Storage

Integrations & Analytics: Firebase Auth, Crashlytics, Sentry, Google Maps, Algolia, Amplitude, FullStory, Stripe

Testing & Delivery: Jest, React Testing Library, ESLint, Prettier, GitHub Actions, lefthook, OTA updates (hot-updater), code review, Agile/Scrum, App Store and Google Play release, Android Studio, Xcode, Git, Postman

PROFESSIONAL EXPERIENCE

Cognith — React Native Developer

January 2026 – September 2026 | Indore, India (WFH)

- **Built native voice and video calling** for a production marketplace using the CometChat Calls SDK with iOS CallKit, Android ConnectionService, PushKit VoIP, FCM and Notifee — including reliable incoming-call handling in foreground, background and killed-app states.
- **Delivered the app bilingually in English and Arabic**, building reusable RTL layout helpers that carried across property search, listing, chat and profile — enabling launch into the Kuwait market rather than retrofitting localisation afterwards.
- **Owned the release pipeline** end to end, shipping **15 App Store releases between February and August 2026** — five in April alone — alongside **18 over-the-air patches** through hot-updater channels, fixing production issues without waiting for store review. GitHub Actions CI with TypeScript, Jest, ESLint and lefthook gating.
- **Reviewed pull requests** on React Native patterns and architecture, with ESLint and lefthook gating making standards enforceable in CI.
- **Designed and maintained the app's HTTP layer** — a centralized Axios client with JWT injection, 401 refresh-token retry, request cancellation and migration support across 100+ REST endpoints.
- **Shipped a multi-step property listing wizard** integrating PACI government address autofill, OCR-based civil ID parsing, AI-generated descriptions, media upload and validation.
- **Instrumented the product for growth**, designing and implementing a 30+ event analytics taxonomy across Amplitude and FullStory to make listing-funnel behaviour measurable.
- **Improved performance and stability** through memoization, pagination, lazy loading, map marker stabilization, gallery flicker fixes and font bundle cleanup, with Sentry and Firebase Crashlytics for triage.
- **One of the core contributors** on a product spanning 75+ screens and 33 feature modules across search, listing, chat, calling, broker verification, analytics and release.

Belgium WebNet Inc. — React Native Developer

December 2024 – December 2025 | Remote

- **Began work on Dallal Real Estate Marketplace**, the Kuwait-market property app subsequently continued at Cognith.
- Shipped React Native features across media, e-commerce and service products in TypeScript and Redux Toolkit, including Stripe checkout, cart management, media playback, search and filtering, and push notifications.
- Improved app responsiveness through component reuse, state management cleanup, API loading and error handling, and device testing.
- Investigated production issues and supported release readiness alongside backend, QA, design and product teams.

Metafic — Software Engineer

January 2022 – November 2024 | Indore, India

- Built cross-platform Android and iOS applications with React Native, React, TypeScript and REST API integrations.
- Developed a reusable component library and modular screens spanning product catalog, cart, checkout, search, scheduling, authentication and notification workflows.
- Integrated Firebase authentication, analytics, Crashlytics, push notifications and secure storage patterns across mobile projects.
- Validated features and debugged platform issues using Jest, React Testing Library, Postman, Android Studio and Xcode.

PROJECTS

AI Job Agent — buildwithai.in

TypeScript/Node CLI that discovers roles across Greenhouse, Lever and Ashby boards, scores fit and tailors application material behind a human approval gate. Multi-provider LLM routing with a fully local Ollama option, SQLite persistence, and Playwright-assisted form filling. Case study and architecture notes at buildwithai.in.

EDUCATION

MCA, Acropolis Institute of Technology and Research — 2020–2022, Indore, India

B.Sc. (Computer Science), St. Paul Institute of Professional Studies — 2017–2020, Indore, India
